it is now more than a quarter of a century since the intergovernmental panel on climate change published their first comprehensive report on the dangers posed by anthropogenic global warming over the last twenty five years the weight of evidence about the causes and consequences of climate change has become compelling the solutions are fairly simple we must switch to more sustainable and efficient forms of energy production and yet they remain elusive globally we produce significantly more greenhouse gases now than we did back in 1990 the sad truth is that this inaction has made climate change inevitable the only question that remains is whether we can prevent it spiraling out of control how do we explain this colossal global failure the problem is political rather than scientific we know the risks and we know how to address them but we lack the political will to do so the media are pivotal in this equation they have the power to set the public and the political agenda climate change and the media volume 2 gathers contributions from a range of international scholars to explore the media s role in our understanding of the problem and our willingness to take action combined these chapters explain how and why media coverage has to date fallen short in communicating both the science and the politics of climate change they also offer guidance about how the media might shift from being the problem to becoming part of the solution
